Helps all students

EDI improves education at the lesson level by combining a strategic collection of instructional practices from the work of educational and cognitive researchers such as Hattie, Rosenshine, Hunter, Sousa, and Marzano.

Research

Get an overview of brain research. We explain how the human brain learns and stores information. This helps teachers understand the importance of the strategies in EDI.

EDI Components

Gain an in-depth look at the vital components of an EDI lesson. Why must every lesson have a Concept Development, strategic steps, and Rule of Two? EDI proves that, with assessments, these components are more important than ever.

Student Engagement

Learn how to implement DataWORKS Engagement Norms. They are used in thousands of classrooms around the world because they work. They include eight strategies that keep students engaged and actively participating in every lesson, making classroom management easier.

Coaching & Feedback

Put it all together with coaching and feedback from an expert in EDI. Our trainers will demonstrate the strategies covered in the workshop, and then participants will be asked to practice them in small groups. This leads to increased teacher retention of the strategies learned during the training.

Checking for Understanding

Discover how to ask the right questions to the right students. Asking powerful, probing questions to non-volunteers will change the culture of the classroom and accurately assess learning in real-time.

Well-Crafted & Well-Taught Lessons

Find out how to combine these two skill sets effectively. They have proven to dramatically improve learning for diverse students in challenging classrooms around the world.

Explicit Direct Instruction Workshop

Learn to engage, guide, and check student understanding during a lesson.

Workshop information

This workshop will deliver training on strategic instructional practices for designing and delivering well-crafted lessons that explicitly teach grade-level content to all students. Gain practical teaching skills that can be used right away for improved student engagement and for more effective classroom management.

EDI Fundamentals - Mon, 20 May 2019

- Brain Research that affects student learning
- How to create Student Engagement
- Effective Lesson Design
- Checking for Understanding to make instructional decisions while teaching
- Creating Higher-Order Questions
- Using Whiteboards to monitor all students
- Providing Corrective Feedback for student errors
- Teaching practice

SPELD Members - \$225

Non-Members - \$245

SPELD Tutors & Professionals - \$195

(early bird prices available until 19 February)

Presented by Joe Ybarra, Consultant

Joe is a co-owner and consultant for DataWORKS. Since 2010 Joe has worked exclusively with DataWORKS as a consultant, lesson designer, and curriculum calibrator. He was one of the lead trainers in the company's recent rollout of curriculum in Australia, and has led the training and staff development at various sites throughout the U.S. Prior to joining DataWORKS, from 2003 to 2010, Joe was an elementary and middle school teacher. He started with DataWORKS in 2000 as a researcher, helping to define effective teaching practices that use cognitive brain strategies. Joe graduated from the University of California, San Diego, with a dual major in Environmental Science/Urban Planning.
