

Tip Sheet

Computer Software and Assistive Technology for Older Students and Adults

Reading and Spelling

- Hand-held spellcheckers such as the *Collins Spellchecker* have phonetic spell correction. For example, if you type in 'nolij' the unit will return 'knowledge'. They can be of great assistance when writing essays, reports, and stories.
- Reading 'pens' allow you to scan text and convert it into voice. They are convenient because of their small size and can read many words in books, newspapers, and other print medium.
- Text Readers will read out any text that is stored in electronic format. Many devices have text-to-speech software embedded into them.
- *Ginger Software* or *Grammarly* are text correction tools that correct grammatical errors, misused words, and spelling mistakes in word processing documents and includes Text-To-Speech software.
- *Collins Cobuild* online dictionary is a useful, free resource to assist with identifying the meaning of unfamiliar words. The definitions provided are easy to understand and include an example of how the word may be used in a sentence.
- The *Collins Comprehensive English Reference Suite* combines the Collins Desktop Dictionary and Spellchecker in one electronic dictionary, and is particularly suited to those who struggle with spelling or want to improve their vocabulary.

Writing

- It is useful to learn *keyboarding skills* for work presentation. The use of laptop computers or portable word processors such as the *Alphasmart* can be very useful for students who have writing difficulties. Notebooks, Mini Laptops, and UltraPortables are lightweight and have a long battery life. *iPads* are also lightweight and have a built in keyboard as well as email facilities.
- There are many portable eBook readers (e.g. *Cool-er*, *Kindle DX*, *the Nook*, and *Reader PRS-700*) as well as digital bookstores which utilise wireless connectivity to enable users to shop for, download, browse, and read eBooks, newspapers, magazines, blogs, and other digital media. They are lightweight and some eBooks have the text to speech facility.
- Voice recognition software can also be a very useful tool to help transform oral expression into written expression. Many devices now have software embedded which will allow you to speak and the software will do the typing for you.
- Touch typing programs such as *Easi Keysi* and *UltraKey* are useful to build up typing speed. Many free typing programs that would suit adults or older students are available online.
- *Pulse SmartPen* records and links audio to what you write, which can then be played back or uploaded onto your computer. It is useful for when taking notes in lectures or meetings and note taking can include diagrams that can be emailed to friends etc.

Literacy Support Software

- Useful tools to help with reading and writing on the computer are *WordQ*, *TextHELP Read and Write*, *ClaroRead*, *WYNN Wizard and Reader*, *SOLO 6*, *Draft Builder*, *Co:Writer* and *Write:OutLoud*. These programs perform a variety of functions including reading scanned text aloud, checking spelling and providing alternatives, providing frameworks for structuring written expression and using text prediction to assist with sentence writing.
- *EduApps* is a range of open source and freeware applications that can be run directly from a USB stick. One feature is the *MyStudyBar*, which is designed to support learners with literacy-related difficulties (www.eduapps.org).
- There are a range of iPad/iPhone apps available to assist with reading, spelling, and writing skills, as well as those focused more specifically on assistive technology. Below are just a sample of some that have been reviewed on-line:
 - *iBooks* and *Freebooks* (electronic books), *iHomework* (homework scheduler and tracker), *Dragon Dictation* (voice to text software), *Say Text* and *Read It* (text readers), *Typ-O HD* (text prediction software).
